

DiskDoubler Specifications

Features

- compresses and expands files from the Finder without the need to launch an application
- expands files when they are "double-clicked" on from the Finder
- compresses and expands files, folders, or entire disks with a single command
- automatically opens a file after it has been expanded, launching the application that created the file
- transparently opens compressed files from within any application
- automatically recompresses files that have been expanded and opened
- optionally combines several files into one for backup or telecommunications
- compresses files an average of 50%
- achieves compression of up to 98% on TIFF files
- achieves enhanced compression on scanned images and sound files
- compresses files on hard or floppy disks
- provides batch file capabilities for automating tasks
- operates in the background under MultiFinder
- preserves original file names and revision dates
- overwrites original file only if compression was successful
- provides Finder-like file information on compressed files
- requires a minimum amount of system memory
- actively detects disk media errors

System Requirements

- Macintosh Plus or greater, 1 MB of memory, and System Software 6.0.2 or later.

A hard disk
is a terrible
thing to
waste.

DiskDoubler

DiskDoubler™

The fastest and most convenient way to expand a disk's capacity.

DiskDoubler is a powerful file compression utility that makes disk drives more efficient. It increases a disk's storage capacity by two or more times!

DiskDoubler is convenient to use. It lets you select any file or folder on the desktop, compressing it in seconds to take up less space.

Once a file is compressed, you can use it as you normally would. Just double-click on a compressed file to open it. Any application can open a compressed file, just as if it weren't compressed. DiskDoubler even remembers which files have been opened and recompresses them when you're done.

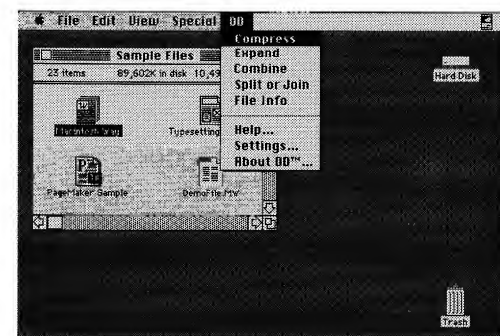

DiskDoubler's remarkably safe file processing scheme insures that files will not be damaged. By using a unique method of backing up files during processing, the likelihood of damaging a file is reduced to zero—even if power loss should occur during compression or expansion.

Get DiskDoubler today and add megabytes of free space to your hard disk. Put that extra space to work for you.

Compress From the Desktop.

On the desktop, just select a file, a folder, or an entire disk to compress or expand!

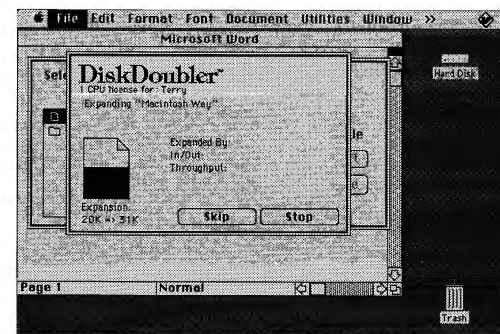

In seconds, the selected files are reduced to a fraction of their original size.

Use Compressed Files Normally.

To use a compressed file, just double-click. When working in an application, DiskDoubler automatically shows compressed files and expands them when opened.

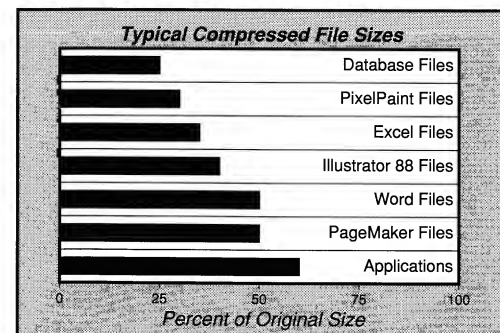

DiskDoubler even remembers which files you open and compresses them when you're done.

Save 50% or More on Most Files.

Any file or application may be compressed with DiskDoubler. Most files are reduced to at least half their original size.

DiskDoubler lets you fit twice as much data on a disk with no extra effort.
